Enabling Farm Office Optimization

Why Optimize Your Farm Office? Common Challenges & Solutions

Farming can be a tough business with challenges all of its own. That doesn't mean you need to suffer with back-office challenges and time-consuming, repetitive tasks. If you can relate to any of the common challenges below, you're not alone.

- **Challenge #1** Shifting markets and narrow profit margins, complicating the task of securing a sustainable future for coming generations
- **Challenge #2** Finding good labor and trained professionals for accounting and office administration, particularly in rural areas
- **Challenge #3** Optimizing and modernizing the farm office tools and processes to maintain and expand family-owned operations

Pinion's ag-specialized advisors understand exactly where the issues stem from, and have created customized solutions to provide help where and when you need it most.

Whether you need:

- Solutions to streamline and standardize your financial system and back-office processes
- Quick access to ag-focused and professionally-trained labor
- Professional accounting, HR, or payroll services

Add the power of Pinion IO technology to your farm office and experience the benefits of centralized, connected and capitalized data.

How Pinion IO Works

Pinion IO utilizes a combination of powerful software tools to standardize data and accounting processes which enable farm businesses to connect financial and operational information, saving you valuable time and resources so you can focus on core business operations. Data is collected and processed using a combination of sophisticated AI tools and professionally trained accountants and bookkeepers. Features can then be scaled and customized according to your farming operational needs.

Trust Your Data

Data standardization is one of the biggest industry problems. Our platform provides accurate data without dozens of spreadsheets and hours of data clean up. As the leading integrated platform supporting standardized data in production agriculture, you can better understand and trust the data coming from your business.

Pinion IO Provides:

Automated accounting functions

Take control of your valuable time and resources.

Streamlined processes

Ensure data accuracy, standardization, and centralization with our integrated solutions and proven best practices.

Insightful dashboards for actionable results

Simplify your reporting needs with customizable options that fit your specific business, operational, and financial goals.

Flexible and trustworthy professionals

Customizable professional services to fit your exact needs related to functions such as bookkeeping, accounting, controller or CFO services, HR, and payroll.

Features and Services Can Include:

- Integrated cloud-based software for seamless financial management
- Complete bookkeeping and data management service, including bill processing and transaction reporting
- Automation tools for managing both cash and accrual books
- Comprehensive document archive and management solution
- AP/AR processing and seamless bill pay
- Advanced accounting automation and rules-based allocation to reduce repetitive tasks
- Reconciliation tools for accurate inventory and fixed costs allocated
- Hard monthly close with professional controller
- Field level reporting, integration of financials with your farm management system
- “Real-time” financial business dashboards and reports
- Standardized financial reporting at every level- entity, crop, field, and more
- Combined financial statements and centralized management KPIs

Customizable add-ons available

Integrated. Organized. Seamless.

Pinion’s Integrated Office solutions deliver a comprehensive end-to-end financial management ecosystem built to enable data-driven financial decisions on the farm.
